

	FMNR Website Optimization Project
Key World Vision Contacts	FMNR Lauren Lailaw: Change Lead, FMNR Scale Up Fiona O'Loughlin: FMNR Global Engagement Lead Digital Delivery Lachlan McIntyre: Head of Digital Delivery Leslie Timm: Digital Delivery Lead
Key IE Contacts	Rakesh Patel: CFO Jason Watt: Developer Adam McLeod: Product

Brief Details

General Info

- Website URL: <https://fmnrhub.com.au/>
- Past IE Design: [Figma](#)
- Budget: TBC
- Timing: TBC based on IE avails
- Potential IE Resources required: UX Designer and Word Press Dev
- Available WVA resources: Project Manager, Product Owner, Testing

Why do we want to do the work?

The FMNR website has worked well for us, but we are finding that:

1. We are missing key sections such as Info about Tony, Partnerships, Our Impact etc. *See more below in the brainstorm session*
2. We need more building blocks/templates, and we need to optimize current blocks/templates
3. We need better UX, especially on mobile and with our Navigation
4. We are missing key interactive elements such as videos and possibly animations

What are we hoping to achieve

1. A website that has key information and tools for its stakeholders- new and established
2. That highlights all the good work (impact) of our FMNR projects and Tony's achievements
3. With more interactivity with elements such as video and interactive maps
4. That is easy for WVA staff to grow and maintain

What we don't want

1. A brand-new website – we are hoping to use what we have as a base first and then add to it
2. Something that we can't manage ourselves
3. Something that can't grow with our needs

Summary Potential Requirements

Clean up

- UX audit of current site templates
- Re- look at the navigation
- Re-look at current widgets

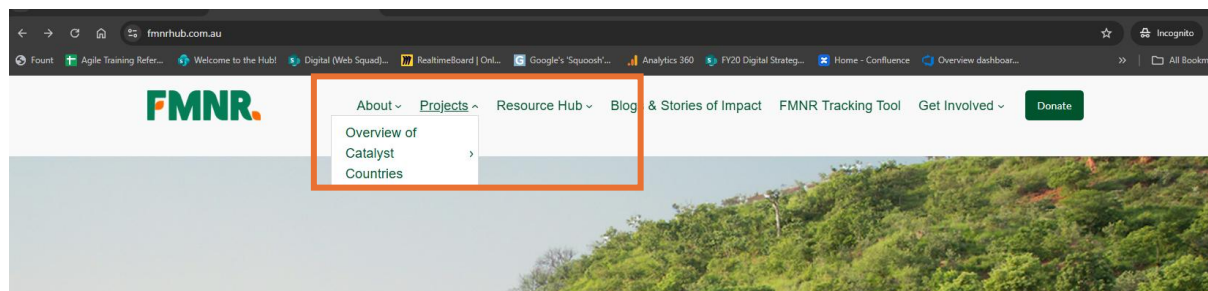

New

- Templates for new sections
- Widgets to better show data
- “Rich Media” capability such as videos and in - video players for YouTube/Vimeo

The above could change based on further chats with IE and new designs from IE

Examples of some friction points

- Nav Headings are too long, and we are not sure if the hierarchy is correct

<https://fmnrhub.com.au/>

- Not the best way to display this type of data, it is very wordy

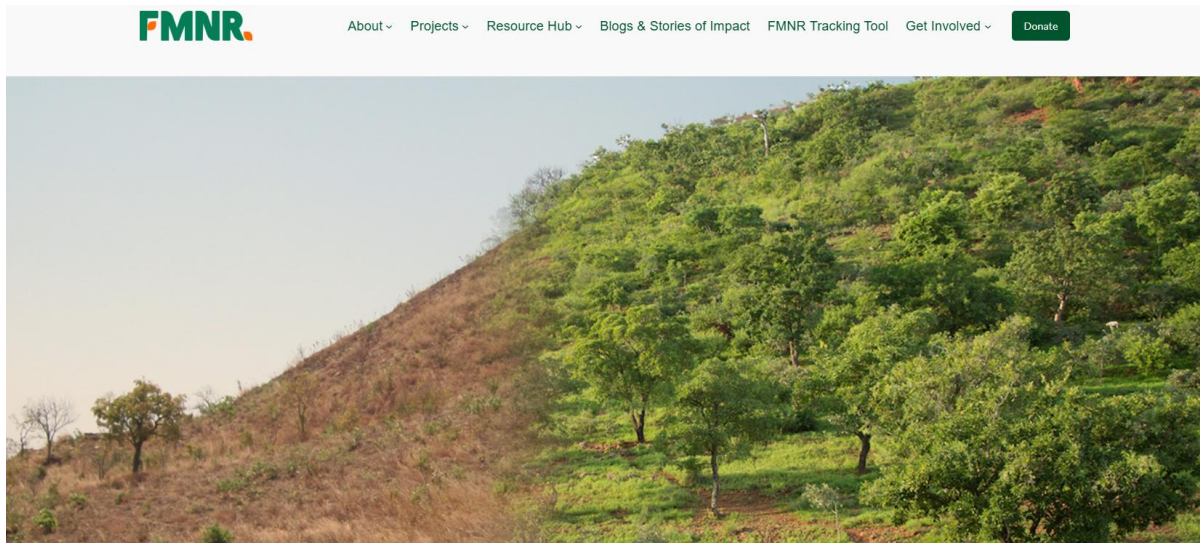

According to the UNCCD, 5.2 million hectares of land in Zambia is estimated to be degraded.

According to the Republic of Zambia, the estimated deforestation rate is 200,000 – 300,000 hectares per year.

According to the UNCCD, climate change could cost Zambia's economy US\$13.8 billion.

<https://fmnrhub.com.au/zambia/>

- We would love to show a video here

<https://fmnrhub.com.au/>

- How do we add visual elements to make long form content like this easier to read

fmnrhub.com.au/blog-post-how-nigers-fmnr-experience-has-inspired-a-global-scaling-movement/

The Niger Farmer Managed Natural Regeneration (FMNR) story is a story of triumph born out of initial failure and struggle. Repeated efforts to restore tree cover through conventional planting methods failed miserably. The turning point came with the discovery of an extensive 'underground forest' comprising of living stumps, roots and seeds with the ability to grow and restore tree cover rapidly and at low cost. Following the development and promotion of FMNR locally, the rate of FMNR spread gained momentum nationally, reaching 250,000 hectares per year over a 20 year period[1]. This resulted in 200 million trees regenerated across 5 million hectares of degraded agricultural land – benefiting the environment while enhancing livelihoods[2].

The spread of FMNR in Niger was largely a farmer-led, bottom-up movement and this achievement is remarkable given the context – Niger is one of the world's poorest countries with a very harsh environment. At the time there was minimal government support, in fact, forestry policies discouraged adoption of FMNR and, NGO support was comparatively small. It is noteworthy that the heroes of this movement were the farmers themselves. And who are they? Nigerien farmers are amongst the world's poorest, most marginalized and risk averse people. These unlikely heroes adopted and fanned FMNR's spread enthusiastically once they realized the benefits.

The Niger story begs the question – if one of the poorest countries in the world, with a very unfavourable environmental, social and economic status can achieve so much with so little, what might be possible on a global scale?

For me the answer is obvious. I believe it is possible to realize restoration rates of 5 million hectares, not in 20 years but in 5 years, and not in one country at a time, but in multiple countries simultaneously.

And it is this Niger story which has inspired World Vision to endorse FMNR scale up as our unique solution to climate change and set an ambitious vision to join forces with a global community of change makers to bring 1 billion hectares of land under restoration.

Restoring 1 billion hectares will transform lives, restore dignity, and reduce the pressures that drive conflict—especially for the one billion children now living in extreme climate risk. But World Vision can't do it alone.

We need partners and implementers.

We need governments to clear the runway.

We need funders, champions, and communities on the ground to lead the charge.

This must be a global movement—rooted in local action.

While FMNR has been my life's work, I don't own it—the movement belongs to communities who make it real.

And it belongs to the donor community which makes this change possible.

FMNR is not just a method. It's a movement of dignity. A movement of peace. A movement of people who refused to give up on their land – or their future.

In Niger, I saw a downward spiral – of degradation, poverty, and despair reversed into an upward spiral of restoration, abundance and hope. And this is what's possible on a globally significant scale. Will you join us?

More info below (Brainstorm from FMNR Team)

Past Brainstorming

FMNR Hub → Partnering Hub

Reflection of Meeting Thursday 5th March 2026

KEEP	ADJUST
• The Hub as a <u>central place</u> for FMNR knowledge, stories, <u>research</u> and resources. • Tony's page — this <u>remains</u> an important entry point and validation of the work. • The GGW page format — this was highlighted as a good example of layout and presentation. • The four flagship countries as key examples of FMNR scale and impact • The strong library of stories, <u>research</u> and case studies already available. Build on this show community led and strong partnerships.	• Structure the Hub around the partner/adopter journey, so different audiences can quickly see where they fit and how to engage. • Improve navigation and UX so information is easier to find with less scrolling. • <u>Consolidate</u> stories, <u>research</u> and case studies so they can be browsed easily on the same page. • Refresh visuals (smaller tiles, improved colour, higher-resolution imagery). • FMNR Fundamentals could be presented in smaller carousel-style displays. • Mobile experience should be prioritised so the Hub displays well on phones. • Show FMNR activity across the partnership, including where WV offices and adopters are working (potentially via a map), while still highlighting the flagship countries. • Strengthen Tony's page with podcasts, articles, <u>awards</u> and external recognition. • Ensure clear calls to action for different audiences (learn, adopt, partner, connect). • Expand how we communicate impact, including livelihoods, fragile contexts, <u>water</u> and ecosystem benefits. • Show how it integrates with existing programs and is a complimentary technique
REMOVE / REDUCE	MISSING
• Things that may not be adding value in their current form. • Large blocks of content that require heavy scrolling. • Sections where information is duplicated across different pages. • Potentially underused features such as “connect with us” if they are not actively being used or <u>monitored</u>. • Make information shorter and punchier - prominent one liners	• Opportunities or gaps that could strengthen the Hub. • A dedicated page for faith-based actors that JR and others can point partners to. • Clear entry points for different partner audiences (faith groups, NGOs, governments, etc.). • Stronger pathways for people to connect, such as newsletter sign-up, <u>LinkedIn</u> or community links. • A clearer EDM / update approach to keep adopters and partners connected. • Calls to action tied to each audience to help people move from learning to engagement. • Potential tools to show the global FMNR movement, including adopters across the partnership. • Specific pages for types of partners – adopters, supporters/influencers, funders (work with private funding on this)

FMNR Hub → Partnering & Adoption Platform

How we are evolving the FMNR Hub – Simplifying its direction

Knowledge Foundation

- A central place for FMNR knowledge, stories, research and resources
- An entry point for people discovering FMNR
- A platform showcasing evidence, case studies and impact
- A way to highlight flagship countries and global activity
- A space elevating Tony Rinaudo's leadership and recognition
- A growing library of tools and learning materials
- Open-source site

Strengthening Engagement

- Clearer partner and adopter journeys
- Improved navigation and user experience
- Easier browsing of stories, research and case studies
- Refreshed visuals and simpler content formats (Eg: GGW page)
- Strong mobile experience
- Visibility of FMNR activity across the partnership
- Stronger calls to action and engagement pathways
- Broader communication of FMNR impact
- Partner specific pages (ie: Faith based)

What the Hub is Not

- A data platform
- A technical program management system
- A donor fundraising site
- A replacement for partnership engagement
- A place for dense or duplicated information
